Welcome to the EGIDA Project website

"Support broader implementation and effectiveness of the GEOSS Science and Technology roadmap and the mission of GEOSS through coherent and interoperable networking of national and international initiatives and european projects."

EGIDA will prepare a sustainable process promoting coordination of activities carried out by: the GEO Science & Technology (S&T) Committee; S&T national and European initiatives; and other S&T Communities. This will be done by supporting broader implementation and effectiveness of the GEOSS S&T Roadmap and the GEOSS mission through coherent and interoperable networking of National and European projects, and international initiatives. EGIDA will deliver evaluation processes, tests and assessment indexes, expertise databases, a "GEO Label" concept, surveys, and other instruments that will link relevant European S&T communities to GEOSS and ensure it is built using state-of-the-art science and technology. Through coordination with the GEOSS S&T Committee (five co-chairs are involved in EGIDA), these deliverables will contribute strongly to the GEO S&T Roadmap implementation. ([see Project Overview](#))

EGIDA is co-funded by the European Commission under the 7th Framework Programme (Grant Agreement no:265124).
